

SESVanderHave, Belgium's leading seed company and one of the World's largest breeders and producers of sugar beet seed, is looking to reinforce its 'omics programmes' by the recruitment of a

BIOINFORMATICS SPECIALIST (M/F)

PROFILE

The successful candidate will join a team dedicated to the application of molecular markers and genomic data in and around plant breeding programmes. Experience is required to support our R & D programmes, handling and assembling next-generation sequencing data, genome and transcriptome sequences, and the setup of informatic systems to make them accessible to less specialist users. He or she will have excellent programming and communication skills, and a keen desire to respond to the diverse needs of the group.

We will be keen to see evidence of past programming achievement in this area. A sound grounding in genetics would be an advantage.

The position will be based in our headquarters and main research site in Tienen, Belgium.
