

Leading institutes in the fields of Epigenetics, Cellular Plasticity and Stem Cells at the Helmholtz Zentrum München are launching a summer internship programme for the summer of 2016. Nine institutes specializing in a range of disciplines, including biology, biochemistry, genetics and computational biology among others, will take part to provide a stimulating and interactive environment in which to explore these exciting fields of research.

We are looking for enthusiastic, highly motivated students to take part in the 6-8 week internship. They will work alongside expert researchers from all over the world to perform cutting-edge techniques, take part in scientific discussions and interact with colleagues from all over the world.

As an international programme we aim to bring students from different countries together creating a network through which they can share their experiences and establish contacts for their future careers in the life sciences. Assistance with travel costs to Munich (a single return journey to Munich, up to 300 euros) and shared accommodation will be provided as well as a small contribution towards living expenses.

For more information on the organisation of the programme and the projects on offer, please visit our webpage at <https://www.helmholtz-muenchen.de/ies/service/opportunities/summer-internships/index.html>

Application deadline: April 3rd 2016

We look forward to welcoming you to Munich!
