

Bio Imaging Core

A VIB FACILITY

The VIB Scientific Image Library

Scientists produce many more images than can be published, so VIB has established a repository for scientific images produced by VIB staff and scientists. Images will be collected and archived and used internally for VIB communications, public outreach activities and decorative placements in our departments. Additionally, images will be distributed through the Science Photo Library, the worlds leading scientific image collection, and could be used in editorials, textbooks, TV and films and even “artistic” uses such as CD covers!

Contributors to the image library will receive full credit (name and VIB departmental affiliation) each time an image is used. In addition there will be a yearly reception for contributors and prizes will be awarded (iPads, digital cameras) to the top images submitted that year. Contributions can be sent to

Chris Guérin - bioimaging.gent@vib.be
Saskia Lippens - Saskia.lippens@dmbr.vib-Ugent.be
